Hi I was asking how do you take care of your fish. I wanted to use your method. Can a betta live in a small tank because i have some betta condos and i wanted to see if they can live in it :cheer:

This is my way take care betta fish.

1. I replace the old water which dirty with the new water 2 times per week and I add a little salt in the water ,too.
2. I feed them by frozen blood worm in the morning and pellet food in the evening.

3. I let my betta fish look at each other for let they flare about 1-2 hours a day. This make them exercise and they will healthy.

This is enough to make your betta fish active and healthy.

Yes , betta can live in a small tank.

And yeah..a divided tank is good for betta...don't feed them together in the same tank.
